

Welcome! We will begin shortly

The Art and Science of Data

Navigating the Data Science Lifecycle

Learning Outcomes

- Develop an idea of the data science and machine learning lifecycle
- Understand how the solution lifecycle is implemented to solve business problems
- Gain insights on the underlying architecture that powers a solution for a business problem
- Comprehend how different job roles come together to deliver these impactful solutions

Guidelines

Listen only mode

Ask questions at the interest of the larger audience

Questions in the Q&A Box

Thank you

Kindly utilize the chat box for **subject-relevant questions only** to maximize your learnings from the session.

Your **questions** are being managed by the academic team, and they will be **answered**.

Meet Your Speaker

Dr. Abhinanda Sarkar
Academic Director at Great Learning

- Alumnus - Indian Statistical Institute, Stanford University
- Faculty - MIT, Indian Institute of Management, Indian Institute of Science
- Experienced in applying probabilistic models, statistical analysis and machine learning to diverse areas
- Certified Master Black Belt in Lean Six Sigma and Design for Six Sigma in GE

Business Context - Ecommerce

Product Selection Struggle

Difficult navigation of web page

Inadequate support

Poor Shopping experience

Poor customer satisfaction

High cart abandonment rate

Track orders

24*7 support

Product Analytics

Search for products

Assist with FAQs

Nudge to complete sales

Strategy for building the ChatBot

“If you were owning this business, what teams would have to come together to build this solution?”

You would need someone to -

- create the UI of the chatbot and integrate it into your website
- create a language based model to answer your customers' questions
- create/gather and manage the data that is needed to train your model
- deploy that model, monitor it and manage it's performance
- manage and drive the development & consumption of this product

UI/UX developer

Data Scientist

Data Engineer

ML Engineer

Product Manager

COLLABORATION

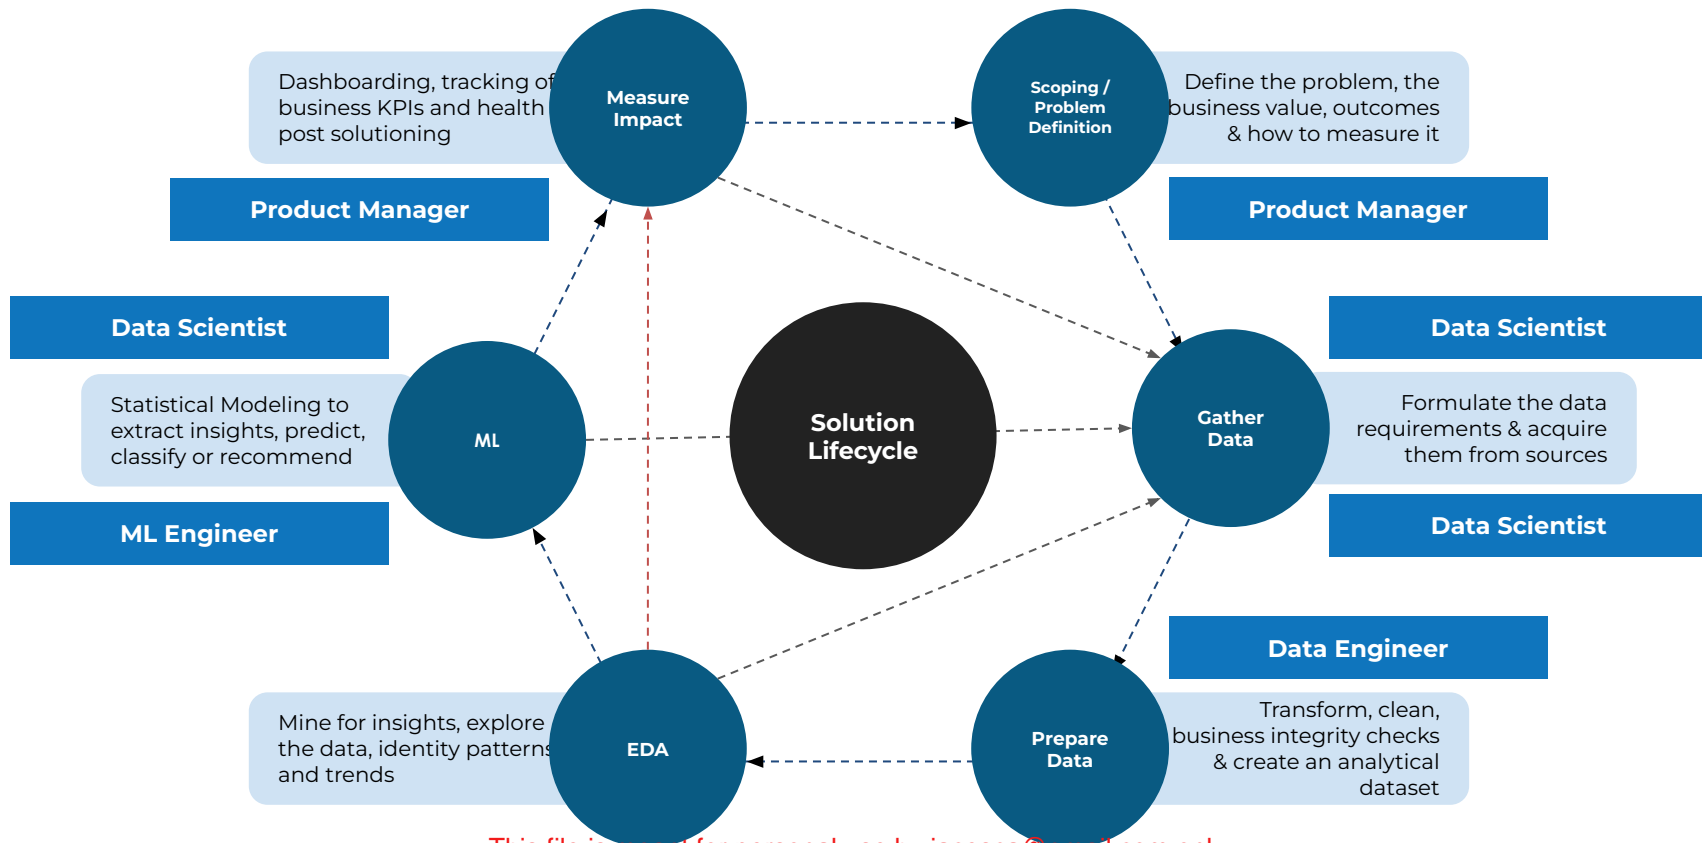

ChatBot is built!

Data Pre-processing

I want to buy a new HP Laptop

Make a purchase

Intent Recognition

I want to buy a new HP Laptop

Product - new Laptop

Entity Recognition

I want to buy a new HP Laptop

Brand - HP

Named Entity Recognition

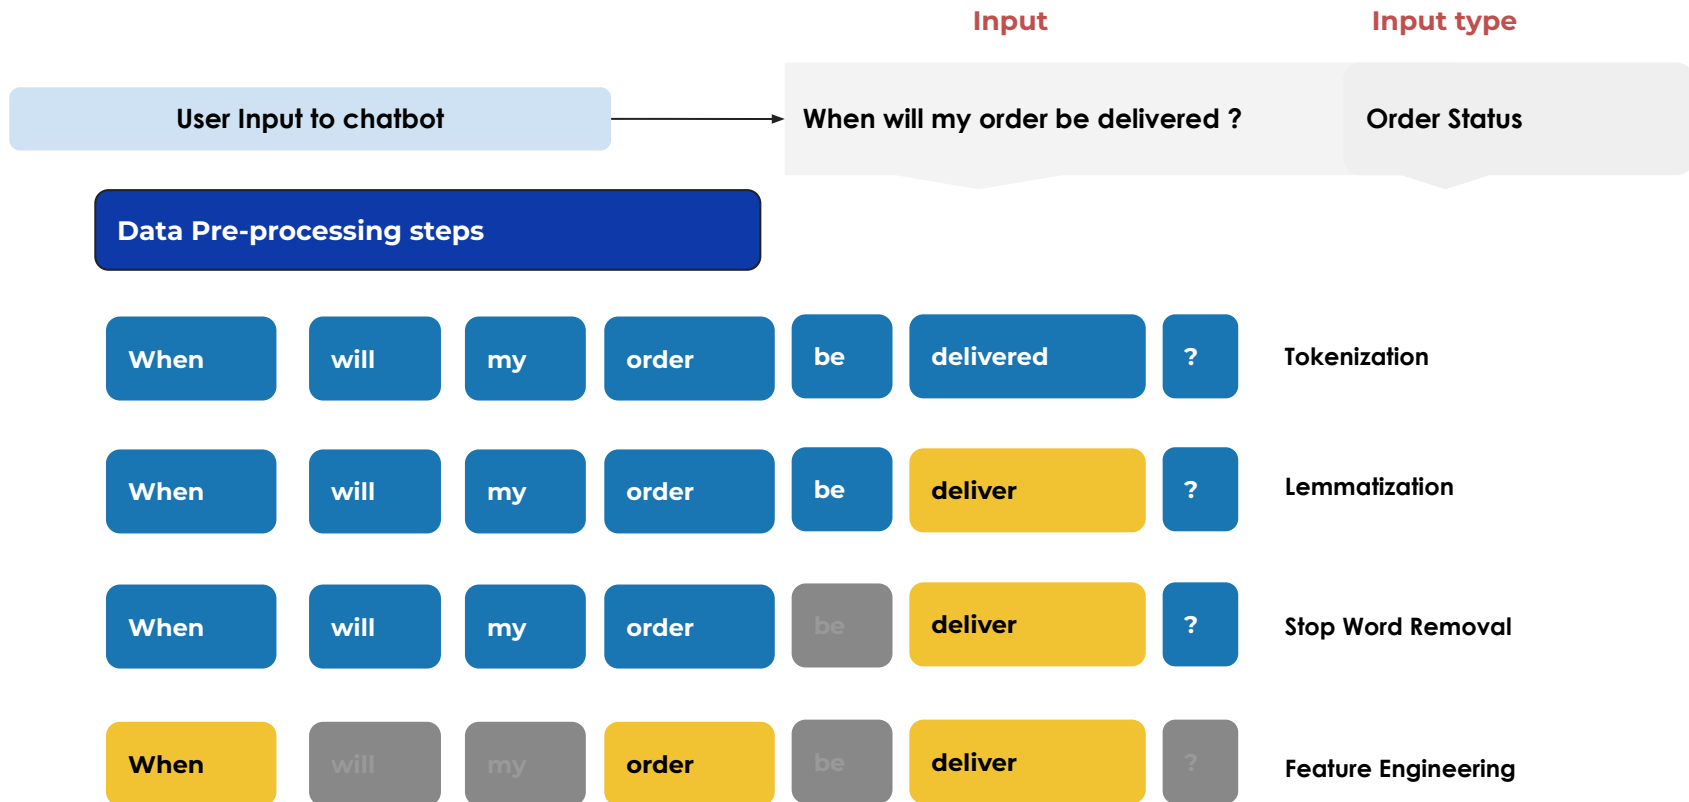

I want to buy a new HP Laptop

Sentiment - Positive

Sentiment Analysis

This is how a machine understands - this is a customer, who seems to have an overall positive sentiment, and wants to purchase a new HP laptop

Training & Tuning

Model Tuning

“Hyperparameters control the behavior of the model during training”

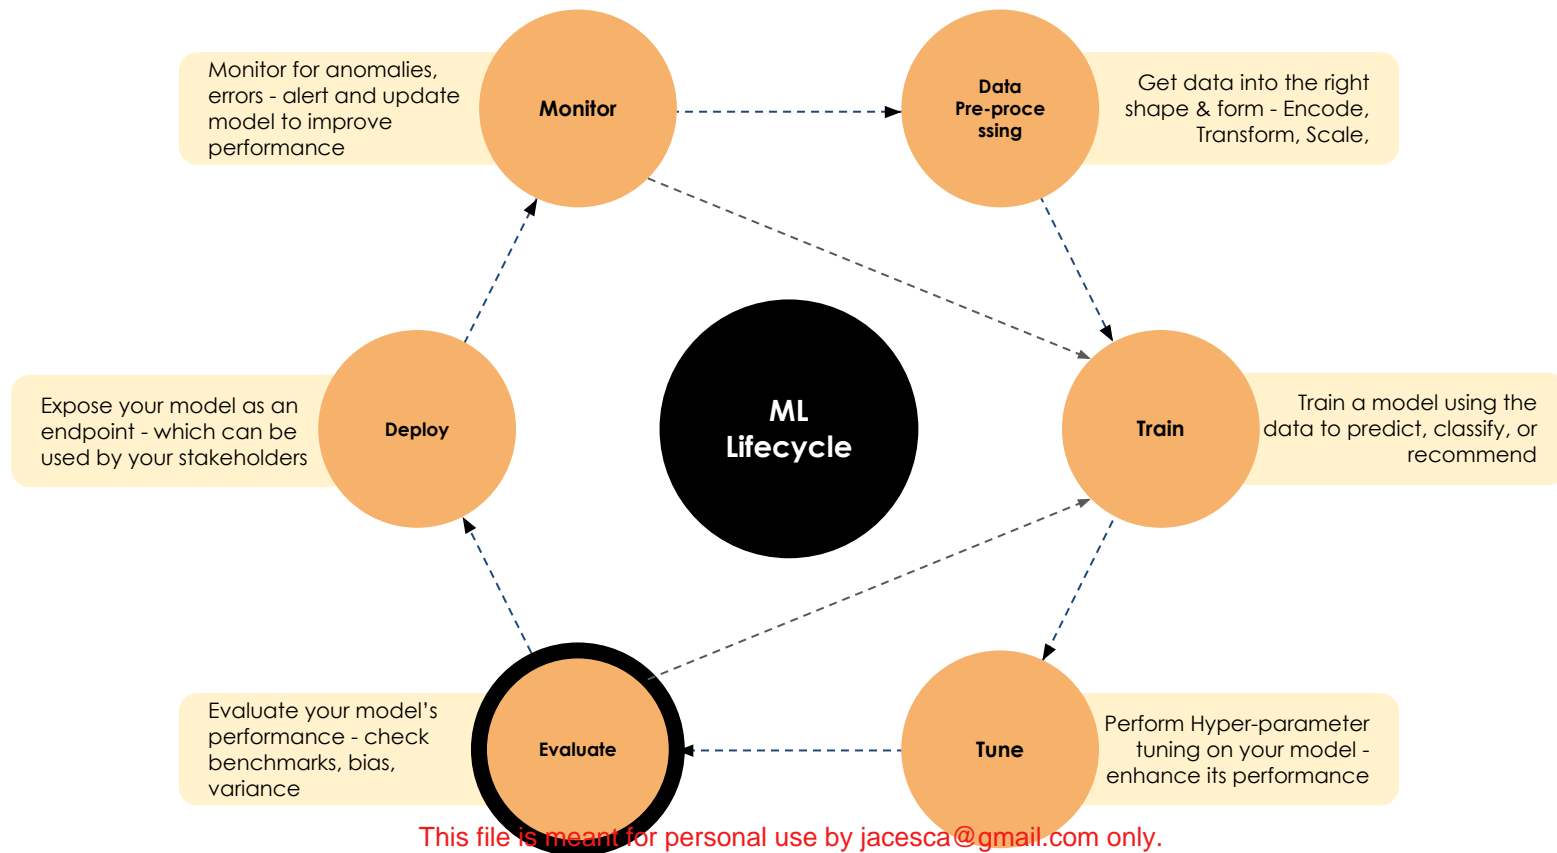

Hyperparameter tuning involves testing different combinations of hyperparameters and selecting the combination that offers the best performance

Summary

To recapitulate, we learned:

1. The problems that customers face commonly in ecommerce domain like inadequate customer support, difficult navigation, product selection issues and how a chatbot can help solve them
2. How a UI-UX developer, a Data Scientist, a Data Engineer, an ML Engineer and a Product Manager collaborate to build a chatbot
3. How the data science and machine learning lifecycle work in gathering data, building and monitoring the chatbot
4. How the data engineering pipeline, the machine learning pipeline and the operations pipeline assist in development and maintenance of the solution
5. How an input given to the chatbot is meaningfully interpreted by the chatbot to generate a suitable response
6. The outcomes that arise with a successful chatbot implementation and how does it impact the business
